KEY: PRODUCT NUMBERING SYSTEM (EXAMPLE ONLY)

GORE-TEX® STRETCH Vascular Grafts have a unique orientation line which aids in determining proper tension. When the longitudinal dots become dashes equal in length to the transverse marks, the graft is under proper tension.

GORE® PROPATEN® Vascular Grafts, which are based on Stretch technology, must be moderately tensioned prior to cutting the graft to length. The blue orientation markers can be used as an aid to determine moderate tension.

Non-stretch GORE-TEX® Vascular Grafts have a light blue dashed line, without transverse marks, and do not need to be tensioned before implantation.
