

FLEXIBLE STRENGTH. PROVEN SUCCESS.

Demonstrated long-term durable clinical outcomes in complex aortoiliac occlusive disease (AIOD) treatment through **5 years**.

Sustained clinical effectiveness through 5 years:

- 89.5% primary patency and 96.1% primary assisted patency per lesion¹
- 89.1% freedom from target lesion revascularization (fTLR) per subject¹

This physician-initiated study enrolled 59 patients from 3 participating centers with patients followed out to **5 years** and beyond.

Kaplan-Meier graph of primary patency with number of lesions at risk

DURABLE PATIENT BENEFIT VS. BASELINE BEYOND 5 YEARS¹

100% of patients improved ≥ 1 Rutherford category from baseline¹

.15 improvement in mean resting ankle-brachial index (ABI) ($P < .001$, .95 mean ABI)¹

3x improvement in median WIQ measures sustained beyond 5 years in long-term follow-up cohort¹

| | Preprocedure (N = 59) | 3 years (N = 39) | 5 years* (N = 27) |
|------------------|--------------------------|---------------------|----------------------|
| Walking distance | 7 | 25 | 21 |
| Walking speed | 3 | 10 | 9 |
| Stair climbing | 3 | 11 | 9 |

* Median follow-up of 6.6 years.
