## Mid-term clinical trial data

U.S. IDE Clinical Trial 3-year follow-up data for all patients from primary enrollment (n = 63)

<table>
<thead>
<tr>
<th>Metric</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Patency — External iliac artery</td>
<td>100%</td>
</tr>
<tr>
<td>Patency — Internal iliac artery</td>
<td>95.1%</td>
</tr>
<tr>
<td>Freedom from reintervention</td>
<td>93.7%</td>
</tr>
<tr>
<td>Buttock claudication</td>
<td>0%</td>
</tr>
<tr>
<td>New onset erectile dysfunction</td>
<td>0%</td>
</tr>
<tr>
<td>Freedom from CIAA enlargement (&gt; 5 mm)</td>
<td>98.3%</td>
</tr>
</tbody>
</table>

| Procedure time                              | 152 minutes |
| Fluoro time                                 | 40 minutes  |
| Contrast used                                | 114 ml      |
| Technical success*                          | 95.2%       |

* Defined as successful implantation with lack of endoleaks

Together, improving life
THE SVS CLINICAL PRACTICE GUIDELINES FOR ABDOMINAL AORTIC ANEURYSM* (AAA) INCLUDE RECOMMENDATIONS PERTAINING TO HYPOGASTRIC PRESERVATION DURING EVAR TREATMENT.

These recommendations include:

**Preservation of flow to at least one internal iliac artery**

**Using a Food and Drug Administration (FDA) approved branch endograft in anatomically suitable patients to maintain perfusion to at least one internal iliac artery.**

<table>
<thead>
<tr>
<th>Level of recommendation</th>
<th>Quality of evidence</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 (Strong)</td>
<td>A (High)</td>
</tr>
</tbody>
</table>

**Preserve Flow. Advance Care.**

- **Preservation matters:** Recommended treatment\(^1,2\) to sustain quality of life
- **Advances repair:** All-In-One System with proven outcomes
- **Performs as promised:** High patency\(^3\), conformability and durability
- **Complete confidence:** More than 20 years of aortic device experience
