Introducing the GORE® TAG® Conformable Thoracic Stent Graft with ACTIVE CONTROL System
Controlled.

Conformable.

Predictable.

Listening carefully to our physician partners, we have applied our spirit of innovation to the complexities of endovascular repair.
Now, endovascular repair of aneurysms, transections, and Type B dissections can be carried out with greater precision than ever.

**Controlled.**
The GORE® ACTIVE CONTROL System is a two-delivery system that offers controlled, staged deployment.

**Conformable.**
The GORE® ACTIVE CONTROL System enhances the exceptional conformability of the stent graft, facilitating the optimized wall apposition.

**Predictable.**
Combining precise placement and exceptional conformability to achieve predictable outcomes.

### Proven results in complex procedures.

**Built on the established success of the Conformable GORE® TAG™ Device.**

*Reported outcomes following 5-year follow-up in FDA PMA clinical studies.*

### Purpose-built to deliver new levels of control.

- Accurate device positioning pre-deployment
- Staged deployment enables placement and angulation refinement without alteration of blood pressure
- Optional angulation control at both intermediate and full diameter
- Reduced profiles on 10 device sizes, with no changes to the stent graft itself
We lead the way in TEVAR innovation.

– The first thoracic stent graft approved in Europe, U.S., and Japan*
– The first TEVAR device to reach 100,000 devices distributed
– The first device approved for endovascular treatment of aneurysms, transections, and Type B dissections
– The first to feature a new delivery system that offers controlled, staged deployment
– 20 years of TEVAR experience
