

GORE® TAG® Thoracic Branch Endoprosthesis (TBE)

COMPLEX AORTIC ARCH REPAIR, EXPANDED

TBE IS APPROVED FOR ZONES 0-2

The off-the-shelf, single branch device physicians trust for Zone 2 branched TEVAR procedures is **also approved for Zones 0 and 1**, expanding minimally invasive repair of all lesions involving the aortic arch.

Zones 0 and 1:

Provides an alternative to open surgical repair and reduces the risk of complication of procedures like sternotomy, cardiopulmonary bypass and circulatory arrest.

Zone 2:

Offers a demonstrated solution that preserves flow to the left subclavian artery (LSA) without the potential risks and complexity of surgical revascularization.

Together, improving life

Performance you can trust for ZONES 0 AND 1

TBE gives physicians an endovascular, on-label option to perfuse a single target vessel, resulting in less procedural burden for Zones 0 and 1 and delivering the results you expect.

1.5%

1.5% Type Ia endoleaks through 12 months. No protocol defined reinterventions for Type Ia endoleaks¹

93.5%

93.5% Freedom from reintervention through 1 year (protocol defined reintervention)¹

98.6%

98.6% Side branch patency through 1 year¹

- Zone 0: n = 0 occlusions
- Zone 1: n = 1 occlusion*

* Did not require intervention

100%

100% Freedom from permanent paraplegia, paraparesis through 30 days¹

Zone 0 depicted

ZONE 2

TBE combines conformability and durability with the confidence that comes from using a proven solution from Gore.
