

COMMON SYMPTOMS

Deep vein disease may interfere with everyday activities and affect your quality of life, which can worsen as symptoms become more severe.¹

Common symptoms include:

- Leg or ankle swelling
- Aching, pain or cramping in the legs
- A feeling of heaviness or fatigue in the legs
- Skin discoloration, thickening or itching
- Open sores (ulcers) near the ankles in more advanced cases

If you notice any of these symptoms, contact your doctor who may refer you to a vascular specialist for a complete diagnosis.
