PRESERVATION MATTERS — A.L.W.A.Y.S.

Hypogastric artery preservation is the recommended treatment\(^1,2\) to sustain quality of life. When determining which preservation method is best, A. L. W. A. Y. S.\(^3,4\) consider each patient’s:

- **A** Activity level
- **L** Length
- **W** Width
- **A** Aortic Disease
- **Y** Young
- **S** Seal

Pre-treatment and five-year follow-up; first clinical use. Images courtesy of Brian Peterson, MD. St. Anthony’s Medical Center; St. Louis, Missouri.
Durable Outcomes. Proven Performance.

The GORE® EXCLUDER® Iliac Branch Endoprosthesis (IBE) is the first and only off-the-shelf aortic branch solution approved in the US and is fully designed to preserve blood flow to external and internal iliac arteries.

Global Registry for Endovascular Aortic Treatment (GREAT) IBE data at four years follow-up:

- **63 patients**
  - Freedom from IBE-related reintervention:
    - Patency* External iliac artery: 96.8%
    - Patency* Internal iliac artery: 98.4%
    - None reported
  - Buttock claudication and sexual dysfunction

The GORE® EXCLUDER® AAA device is the most-studied† EVAR stent graft and designed for durable outcomes.

GORE® EXCLUDER® AAA Device data from GREAT through‡ five years follow-up:

- **3,274 patients**
  - Type Ib endoleaks: 0.7%
  - Limb occlusion*: 0.7%

* Based on reported occlusion adverse events.
† Based on GREAT IBE data through four years follow-up with n = 96.
‡ Based on company-sponsored trials and registries shown on clinicaltrials.gov for currently available stent grafts.
§ GREAT, n = 3,274. To calculate the overall event rates from procedure through end of study period, all subjects who could have had events, regardless of length of follow-up, were included. For outcome data, GREAT only collects site reported serious adverse events. Therefore, all reported endoleaks are defined as serious and require reintervention.
